

CS 355 Homework #1: Points and Vectors Review

Complete the following problems in the book and compare your answers to those given in the back of the book. You do not have to turn in anything, and you will not be graded on this homework.

This means you may, of course, simply skip this assignment. But I encourage you to at least skim through the problems and make sure you feel comfortable with how to do each one. If you aren't sure about some of them, then try working those problems and compare your answers to those in the back. If you're still not comfortable with these ideas, come get help from the TA or instructor.

The purpose of this assignment (so to speak) is to allow you to assess your own command of a few basic concepts you should have seen prior to this class but may not have used in a while. It should also give you practice doing things on paper and pencil (like you might for an exam) that you will be coding for upcoming labs.

- 2.5 b
- 2.6 a
- 2.7 e
- 2.8 c
- 2.9 c, d
- 2.10
- 2.20 a, b(1,5)
- 3.4 a, c, e
